

solar system 3D

A visually thrilling journey through space and time - with an added dimension.

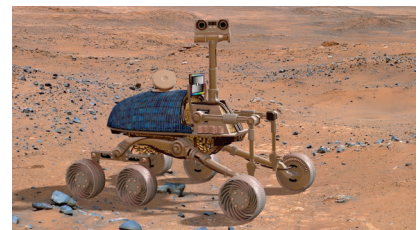

SOLAR SYSTEM 3D combines entertainment, education, information and science-fiction. Join our host on the International Space Station of the year 2050. At his control is a fleet of likeable NOMAD robots, installed on every planet and planet-like moon in our solar system.

Marvel at the three-dimensional sights transmitted by their cameras, and learn many things about the astral bodies that surround us. The mysteries of the universe are also explained, like the creation and destruction of stars and planets, the birth of Earth and many more.

Plus, the exciting search for extraterrestrial life is a central theme of the show, revealing some little-known facts.

All imagery is based on actual NASA data and astronomical research. The high-end stereo visuals give audiences the first-hand experience of visiting real otherworldly landscapes.

Created by the team behind the stereoscopic effects for OSCAR® nominated documentary PINA by Wim Wenders.

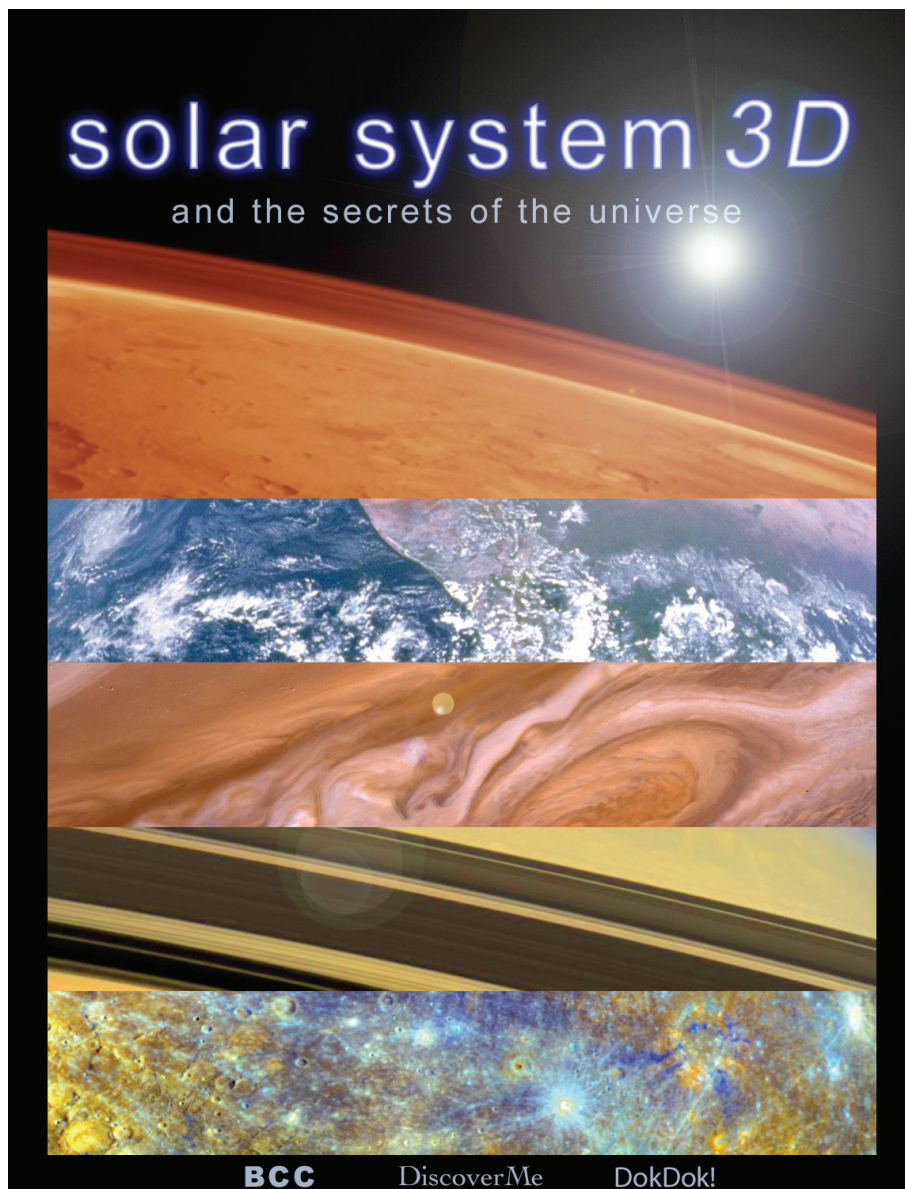

- ◆ Stereoscopic 3D mini-series - 4 episodes of 23 mins runtime
- ◆ Feature-length edited version is also available
- ◆ Expertly created, eye friendly 3D computer animations
- ◆ Live action scenes filmed in stereoscopic 3D
- ◆ 2D versions available in Full-HD and SD
- ◆ Thoroughly researched script, scientifically accurate data
- ◆ Hosted and narrated by a North American actor
